- **Compatible with Mac OS 8.6 through Mac OS X**

### Easily Burn CDs at up to 16x speed right from the comfort of your iMac!

Up until now, the only way to burn CDs on a 233, 266, or 333MHz tray-loading iMac was with a slow, unstable and *external* USB CD-RW drive. Most original iMac fans bought their iMac because it was a high-performance *all-in-one* machine that required very little desktop space... and now it can be once again!

Introducing the MCE iCDRW-16 16x10x24 internal CD-RW drive for your iMac. Easily replace your iMac's original CD-ROM drive with the MCE iCDRW-16 drive and blaze, don't burn, CDs at up to 16x speed using Apple's iTunes, Finder Burning or many third-party CD-recording applications such as Roxio's Toast... right from the comfort of your own iMac!
